I believe that the Mitacs Globalink Research Internship is of great importance for Ukrainian students. It is an amazing way to learn more about a completely different up-to-date education system, to be inspired to study and develop priceless professional skills. However, this is not simply a good personal opportunity. The program may help Ukraine to grow a generation of young people who want to change higher education and help other students. I think that it is really important for us to be ready and willing to do so.

” Before arriving, I was actually a little skeptical about the program's benefits and didn't have high expectations of the summer in Canada. After a month here, I can certainly say the program exceeded my expectations. I have been heavily involved in the project, developing my technical skills and learning about the team management approach used in our lab. By the end of the month, we will have published a paper to which I largely contribute and it feels incredible to be responsible for a scope of work and get recognition for doing it well.

From this program I get a huge charge of positive emotions. Only being here I've truly believed in myself and my strength and began to radically change my thinking and attitude to life. During this time I have acquired a lot of new interesting acquaintances. I feel a surge of new strength and energy for changes both in myself and in the science of Ukraine. Many thanks to the people who help us in matter.

# Pavlo Kashko

” It opens a range of great opportunities not only to obtain skills and gain knowledge but also to build a wide network between scientists in Canada and Ukraine. Ukraine has a high potential in preparing specialists in all fields of science. However, we do not have enough money to provide such experience to all people. Having an internship with Canadian professor in different society help you meet new friends, explore the world and thinking more globally.

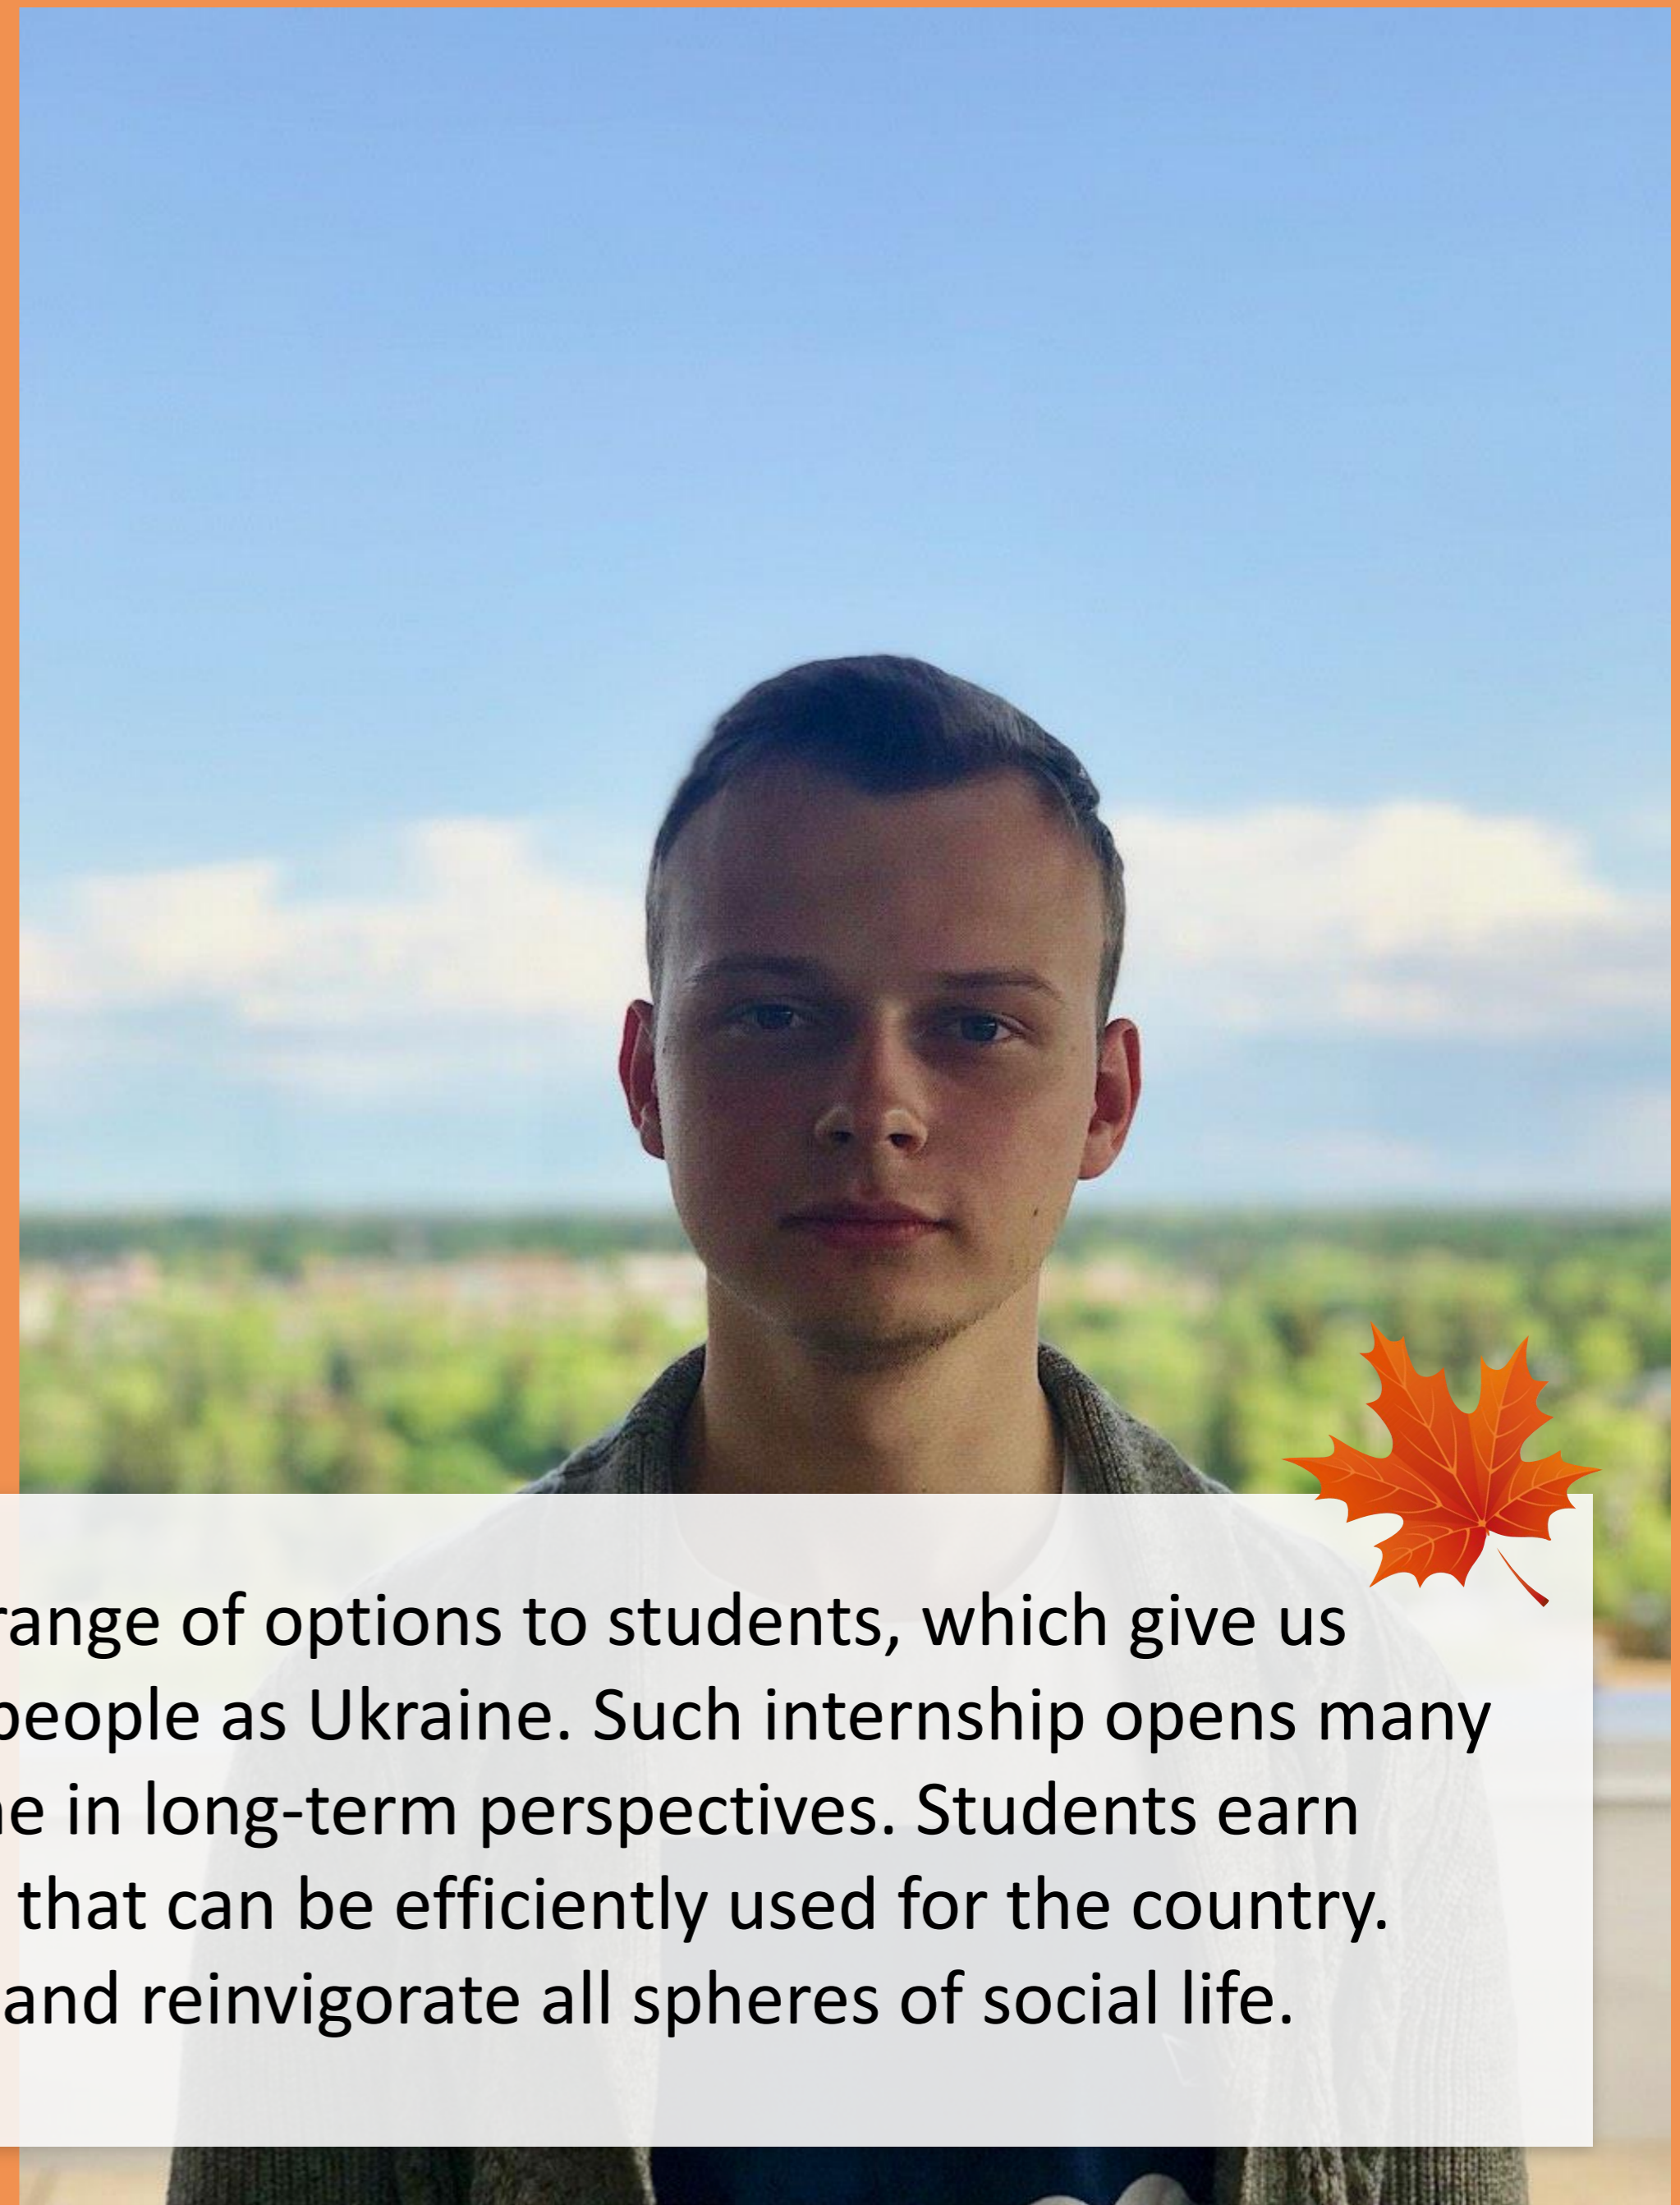

# Olena Shakhova

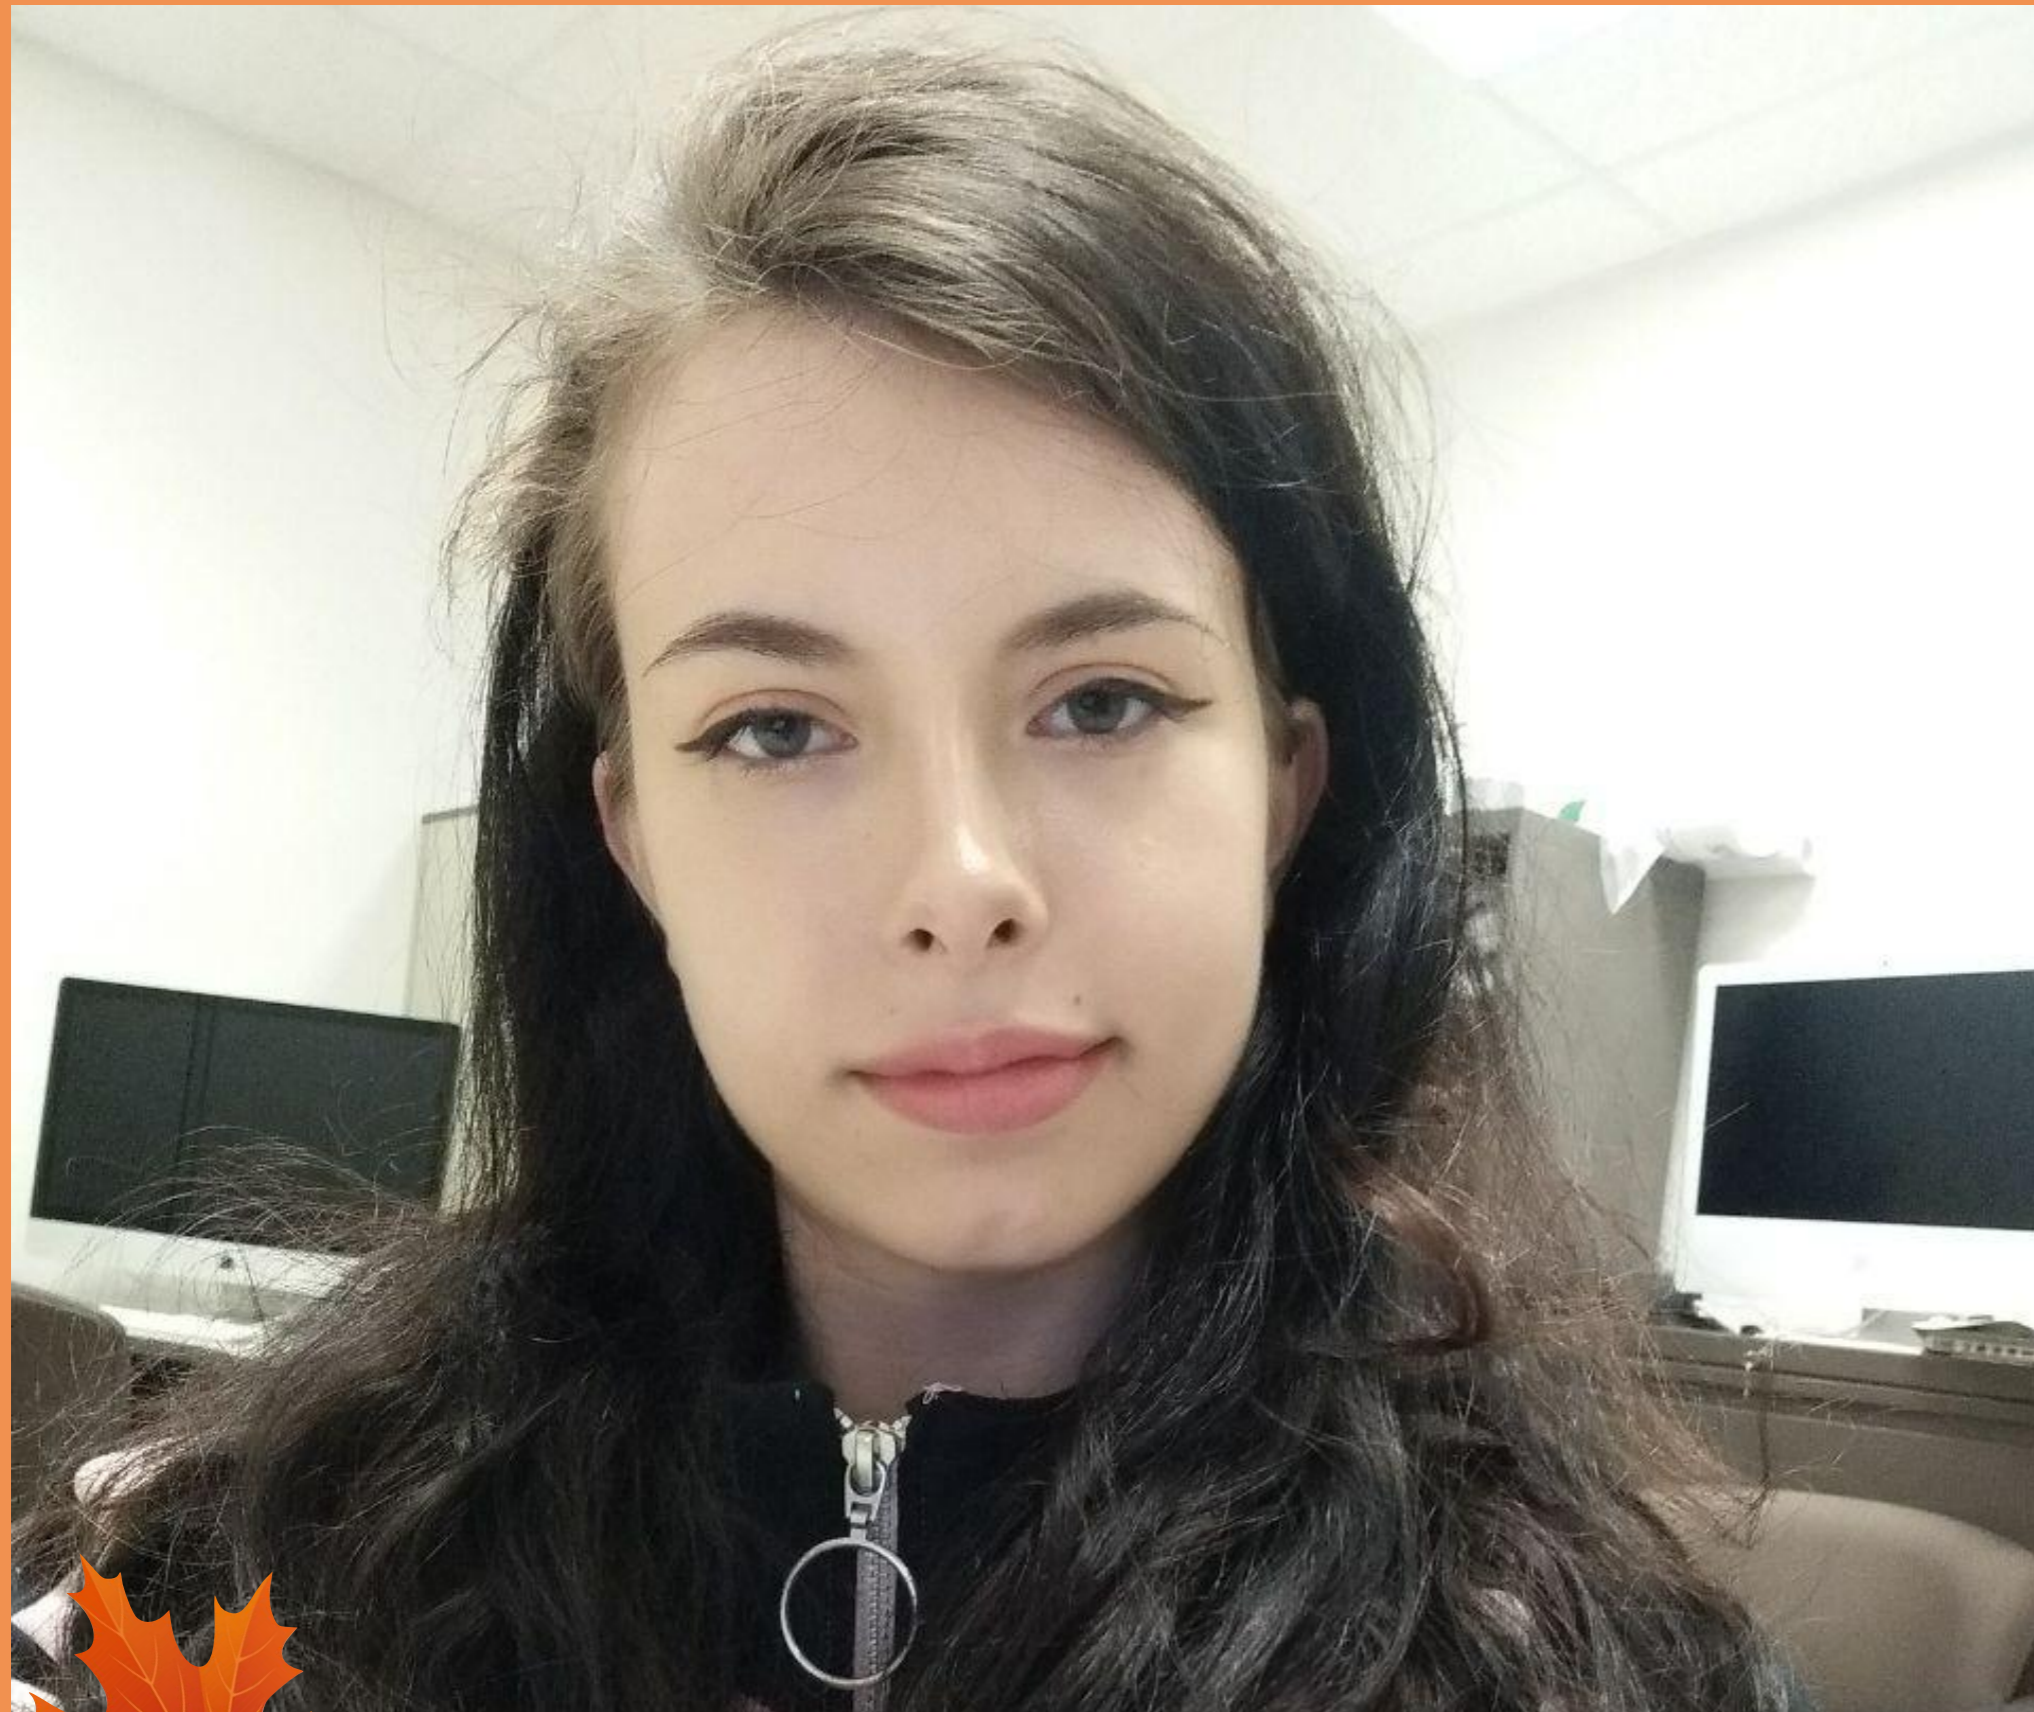

All the expectations that I've had before coming to Canada were met. Working as an independent researcher and being the only person who is responsible for the entire project made me develop different skills that are extremely necessary in any field, such as time management, self-discipline, and flexibility. I'm really happy about the fact that I could build a strong connection with the professor I'm working with on the project, and it definitely helps me to achieve better results at my work. Moreover, it's impossible not to mention joy of exploring Canada at the same time while working here.

”

” Mitacs Research Internship provides a wide range of options to students, which give us enormous boost to further development as people as Ukraine. Such internship opens many great and incredible opportunities for Ukraine in long-term perspectives. Students earn priceless experience and absorb information that can be efficiently used for the country. Actually these students will change, rebuild, and reinvigorate all spheres of social life.

## Maryna Mondrusova

 In my opinion, the program provides an excellent opportunity for young scientists to explore Canadian methods of workspace organization and target-setting, experience working in a multicultural research team of professionals from all around the world and use hardware and software inaccessible for students in Ukraine. It also allowed me to compare life conditions and infrastructure in two river-based industrial cities with a similar population. Moreover, I was pleasantly surprised with the friendliness and courtesy of Canadian people — I'm definitely going to spread this attitude on returning home. ”

# Vladyslav Sosnov

” It goes without saying that this program is important for Ukraine. Especially, for Ukrainian students and for Ukrainian education. Because after completion of this program interns will be able to share the experience with their home university professors, implement some studying techniques they spotted here, in Canada and materials which are in demand now. So, it will raise the quality of Ukrainian education. Moreover, they'd tell the details to students who are only going to submit documents or even do not know anything about this program.

# Maryna Kluban

Mitacs programs gives unique opportunity for students to experience research and studying process in Canada, which is known to be one of the greatest research hubs in the world. Canadian education introduces student to the world of science, providing all the necessary modern technologies and resources. With knowledge provided by Mitacs, students, who have initiative, can support and contribute to Ukrainian educational system, improving general situation in field of research and science.

# Rostyslav Blium

” The program provides students great opportunity to become familiar with novel research methods, which gives unique knowledge that can positively affect a future career in science. Also, it is important that experience exchange occurs during an internship, so a student can bring fresh ideas to home institutions and boost up Ukrainian science development.
